## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 9-12, 66 are rejected under 35 U.S.C. 102(b) as being anticipated by Sung et al ('179).

Sung teaches the following claimed limitations as follows:

9. A memory device comprising:

a substrate (11)

a gate stack (12/14) pair comprising two gate stacks formed on the substrate;

a conductive contact (40) between the two gate stacks and in contact with a doped region of the substrate (26/27);

a vertical oxide spacer adjacent to each gate stack of the gate stack pair (28);

a respective nitride layer (29/18) overlaying and in contact with each said vertical oxide spacer and a top layer (18) of each said gate stack neither of the nitride layers extending to overlay the doped region; and

a respective dielectric layer (30) overlaying each the nitride layer, the dielectric layer being spaced apart from each the vertical oxide spacer by the nitride layer such that the dielectric layer is not in direct contact with the vertical oxide spacer (Fig.s 2F-2I).

10. The memory device of claim 9, wherein said gate stack comprises a floating gate and a control gate (Col.3, lines: 35-45).

11. The memory device of claim 9, wherein said vertical oxide spacer is between about 50 Å and about 300Å in thickness (Col.4, lines: 1-5).

12. The memory device of claim 11, wherein said vertical oxide spacer is about 100Å and about 200Å in thickness (Col.4, lines: 1-5).

66. (Previously Presented) The memory device of claim 9, wherein the dielectric layer comprises borophosphosilicate glass (Col.4, lines: 10-20).

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 13 is rejected under 35 U.S.C. 103(a) as being unpatentable over Sung ('179).

Art Unit: 2813

Sung teaches the memory device of claim 9, however fails to specify wherein said nitride layer has a thickness equal to about one half the width of said vertical oxide spacer.

However, such claims are considered obvious, "The law is replete with cases in which the difference between the claimed invention and the prior art is some range or other variable within the claims. . . . In such a situation, the applicant must show that the particular range is critical, generally by showing that the claimed range achieves unexpected results relative to the prior art range." In re Woodruff, 919 F.2d 1575, 16 USPQ2d 1934 (Fed. Cir. 1990). See MPEP § 716.02 - § 716.02(g) for a discussion of criticality and unexpected results.

### ***Response to Arguments***

Applicant's arguments with respect to the above claims have been considered but are moot in view of the new ground(s) of rejection.
